## 3<sup>rd</sup> Quarter Overview

### Global equities continue rally in the third quarter

Global equity markets continued their momentum from the second quarter as domestic<sup>1</sup> and international<sup>2</sup> stocks posted positive gains of 9.2% and 6.7%, respectively. Large-scale monetary and fiscal stimulus measures, as well as expectations for a near-term vaccine breakthrough continued to serve as tailwinds for equity returns during the quarter. Leading the way for domestic equities were U.S. mega-cap stocks as investors continued to favor large, growth-oriented companies largely insulated from the effects of mandatory lockdowns, particularly in the technology sector. For the trailing three months ending September 30th, large-cap stocks<sup>3</sup> returned 9.7% while mid<sup>4</sup> and small-cap stocks<sup>5</sup> returned 8.0% and 5.8%, respectively. Large-caps maintained their edge over mid and small-cap equities by posting gains of 17.1% over the trailing one year period. Meanwhile, growth stocks<sup>6</sup> continued to outperform value<sup>7</sup>, recording gains of 36.1% compared to -5.7% for value over the same period. The broad market rebound also continued in international equities, where emerging markets<sup>8</sup> returned 9.2% and developed markets<sup>9</sup> returned 6.0% for the quarter. A faster recovery from the coronavirus pandemic in China and other emerging Pacific economies also helped emerging market stocks continue their outperformance over the past one-year period, gaining 9.5% versus a return of 2.1% for developed markets.

### Fixed income returns remain positive despite low yields

---

With the Federal Reserve reaffirming its stance to keep the federal funds rate at or near zero for the foreseeable future, U.S. bonds<sup>10</sup> managed to record slight positive gains during the third quarter as the broad fixed income market returned 0.7%. Markets continued their risk-on approach as evidenced by positive gains in high yield bonds<sup>11</sup> (+4.6%) and further tightening of credit spreads, with investment-grade corporate bonds<sup>12</sup> returning 1.5% during the quarter. Over the one-year period ending September 30th, Treasury and credit bonds have posted positive returns of 8.0% and 7.5%, respectively. The yield curve continues to be upward sloping with a spread of 0.56% between the two and ten-year Treasury securities, compared to 0.50% at the end of the second quarter.

Within international fixed income, a continued weakening of the U.S. dollar bolstered performance of unhedged international bonds<sup>13</sup> over their hedged<sup>14</sup> counterparts, returning 4.1% for the quarter versus 1.1% for hedged. Their outperformance continued over the one-year period as unhedged and hedged international fixed income managed to return 5.5% and 2.3%, respectively.

### Final Thoughts

---

While the COVID-19 pandemic continues to weigh on the global economy, signs of optimism emerged in the third quarter suggesting a recovery is underway in some parts of the world. While the speed of the recovery has yet to be determined, positive growth in China, falling unemployment in the U.S., and further easing by fiscal and monetary policymakers should serve as tailwinds as we enter the fourth quarter. Risks to the downside still remain which include a surge in new virus cases and an increase in lockdown measures and other restrictions leading to a slower recovery for the broad global economy. In conclusion, Vanguard still projects a relatively uneven recovery, as global economies, sectors, and industries figure to experience varying trajectories on their paths back to their pre-COVID levels.
